Date 17/08/2020 Certificate Serial No/Ref: RLE000414

RL Electrical Electrical Installation Condition Report

(Requirements for Electrical Installations – BS 7671 IET Wiring Regulations)

A. DETAILS OF THE CLIENT OR PERSON ORDERING THE WORK	
Name: Mrs J Wright	
Address: Bethany House, 398 Huntington Road, York, YO31 9HU Email: N/A	
B. REASON FOR PRODUCING THIS REPORT	
Expiry of old report	
Date(s) inspection and testing carried out: 17/08/2020	
C. DETAILS OF THE INSTALLATION WHICH IS THE SUBJECT OF THIS REPORT	
Occupier: Let Accommodation	
Address: 31a Brownlow Street York	
Description of premises: Jacob Domestic N/A Commercial N/A Industrial N/A Other, please specify :	
Estimated age of the wiring system 15 Years Years Evidence of additions or alterations N/A Yes N/A No No No No No No No No No N	
Installation records available? Yes Volume No N/A Date of last 18/07/2015 If yes, Alternative source of supply years (as described in attached N/A)	A
(Regulation 621.1) inspection estimated age schedule if applicable)	
D. EXTENT AND LIMITATIONS OF INSPECTION AND TESTING The inspection and testing detailed in this report and accompanying schedules have been carried out in accordance with BS 7671 as amended	n
Extent of the electrical installation covered by this report 75% of fixed wiring	
Extent of the electrical installation covered by this report 75% of fixed wiring Agreed limitations including the reasons, see Regulations 653.2	
Agreed limitations including the reasons, see Regulations 653.2 N/A	
Agreed limitations including the reasons, see Regulations 653.2	
Agreed limitations including the reasons, see Regulations 653.2 N/A Limitations agreed with N/A Position (if applicable) N/A Operational limitations All Insulation resistance tests done at 250v due to electronics	
Agreed limitations including the reasons, see Regulations 653.2 N/A Limitations agreed with N/A Position (if applicable) N/A Operational limitations	
Agreed limitations including the reasons, see Regulations 653.2 N/A Limitations agreed with N/A Position (if applicable) N/A Operational limitations All Insulation resistance tests done at 250v due to electronics	ted
Agreed limitations including the reasons, see Regulations 653.2 N/A Limitations agreed with N/A Position (if applicable) N/A Operational limitations including the reasons All Insulation resistance tests done at 250v due to electronics It should be noted that cables concealed within trunking and conduits, under floors, in roof spaces, and generally within the fabric of the building or underground, have not been inspect	ted
Agreed limitations including the reasons, see Regulations 653.2 N/A Limitations agreed with N/A Position (if applicable) N/A Operational limitations including the reasons All Insulation resistance tests done at 250v due to electronics including the reasons It should be noted that cables concealed within trunking and conduits, under floors, in roof spaces, and generally within the fabric of the building or underground, have not been inspectually agreed between the client and inspector prior to the inspection. An inspection should be made within accessible roof space housing other electrical equipment.	eted
Agreed limitations including the reasons, see Regulations 653.2 N/A Limitations agreed with N/A Position (if applicable) N/A Operational limitations including the reasons All Insulation resistance tests done at 250v due to electronics It should be noted that cables concealed within trunking and conduits, under floors, in roof spaces, and generally within the fabric of the building or underground, have not been inspect unless specifically agreed between the client and inspector prior to the inspection. An inspection should be made within accessible roof space housing other electrical equipment. E. SUMMARY OF THE CONDITION OF THE INSTALLATION General condition of the installation (in terms of electrical safety)	eted
Agreed limitations including the reasons, see Regulations 653.2 N/A Limitations agreed with N/A Position (if applicable) N/A Operational limitations including the reasons All Insulation resistance tests done at 250v due to electronics It should be noted that cables concealed within trunking and conduits, under floors, in roof spaces, and generally within the fabric of the building or underground, have not been inspect unless specifically agreed between the client and inspector prior to the inspection. An inspection should be made within accessible roof space housing other electrical equipment. E. SUMMARY OF THE CONDITION OF THE INSTALLATION	eted
Agreed limitations including the reasons, see Regulations 653.2 N/A Limitations agreed with N/A Position (if applicable) N/A Operational limitations including the reasons All Insulation resistance tests done at 250v due to electronics It should be noted that cables concealed within trunking and conduits, under floors, in roof spaces, and generally within the fabric of the building or underground, have not been inspect unless specifically agreed between the client and inspector prior to the inspection. An inspection should be made within accessible roof space housing other electrical equipment. E. SUMMARY OF THE CONDITION OF THE INSTALLATION General condition of the installation (in terms of electrical safety)	eted

An unsatisfactory assessment indicates that dangerous (code C1) and/or potentially dangerous (code C2) conditions have been identified

F. RECOMMENDATIONS

Where the overall assessment of the suitability of the installation for continued use on page 1 is stated as UNSATISFACTORY, I/we recommend that any observations classified as 'Danger present' (Code C1) or 'Potentially dangerous' (Code C2) are acted upon as a matter of urgency. Investigation without delay is recommended for observations identified as 'Further investigation required' (FI) Observations classified as 'improvement recommended' (Code C3) should be given due consideration.

Subject to the necessary remedial action being taken, I/we recommend that the installation is further inspected and tested by

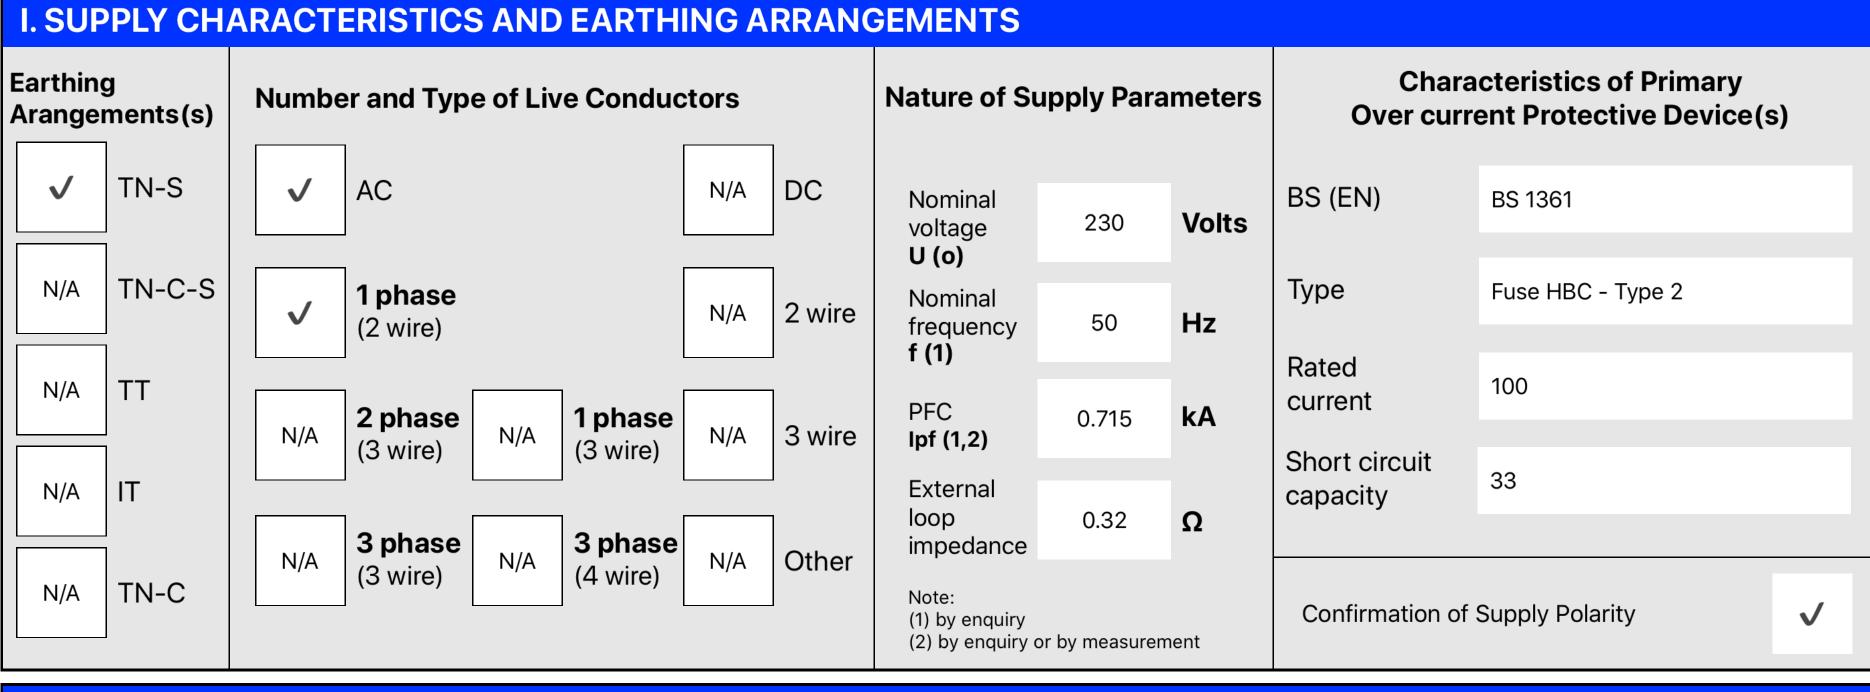

17/08/2020

G. DECLARATION

I/We, being the person(s) responsible for the inspection and testing of the electrical installation (as indicated by my/our signature(s) below), particulars of which are described above, having exercised reasonable skill and care when carrying out the inspection and testing, hereby declare that the information in this report, including the observations and the attached schedules, provides an accurate assessment of the condition of the electrical installation taking into account the stated extent and limitations in section D of this report.

CONDITION REPORT GUIDANCE FOR RECIPIENTS

(to be appended to the report)

This report is an important and valuable document which should be retained for future reference

Notes for the person producing the report

- 1 The purpose of this Condition Report is to confirm, so far as reasonably practicable, whether or not the electrical installation is in a satisfactory condition for continued service (see Section E). It should not be used for the replacement of a consumer unit/distribution board. The Report should identify any damage, deterioration, defects and/or conditions which may give rise to danger (see Section K).
- 2 The person ordering the Report should have received the "original" Report and the inspector should have retained a duplicate.
- 3 The Report should be retained in a safe place and be made available to any person inspecting or undertaking work on the electrical installation in the future. If the property is vacated, this Report will provide the new owner/occupier with details of the condition of the electrical installation at the time the Report was issued.
- 4 Where the installation incorporates a residual current device (RCD) there should be a notice at or near the device stating that it should be tested six monthly. For safety reasons it is important that this instruction is followed.
- 5 Section D (Extent and Limitations) should identify fully the extent of the installation covered by this Report and any limitations on the inspection and testing. The inspector should have agreed these aspects with the person ordering the Report and with other interested parties (licensing authority, insurance company, mortgage provider and the like) before the inspection was carried out.
- 6 Some operational limitations such as inability to gain access to parts of the installation or an item of equipment may have been encountered during the inspection. The inspector should have noted these in Section D.
- 7 For items classified in Section K as C1 ("Danger present"), the safety of those using the installation is at risk, and it is recommended that a skilled person competent in electrical installation work undertakes the necessary remedial work immediately.
- 8 For items classified in Section K as C2 ("Potentially dangerous"), the safety of those using the installation may be at risk and it is recommended that a skilled person competent in electrical installation work undertakes the necessary remedial work as a matter of urgency.
- 9 Where it has been stated in Section K that an observation requires further investigation (code FI) the inspection has revealed an apparent deficiency which may result in a code C1 or C2, and could not, due to the extent or limitations of the inspection, be fully identified. Such observations should be investigated without delay. A further examination of the installation will be necessary, to determine the nature and extent of the apparent deficiency (see Section F).
- 10 For safety reasons, the electrical installation should be re-inspected at appropriate intervals by a skilled person or persons, competent in such work. The recommended date by which the next inspection is due is stated in Section F of the Report under 'Recommendations' and on a label at or near to the consumer unit/distribution board. It is recommended that a competent person undertakes the necessary remedial work immediately.
- 11 Any deficiencies with intake equipment should be reported to the person ordering the work
