Date 20/11/2023 Certificate Serial No/Ref: 231120

## D A Carlton Electrical Installations Electrical Installation Condition Report

(Requirements for Electrical Installations – BS 7671 IET 18th Edition Wiring Regulations)

A. DETAIL	C OF THE OH	ENT OR REDCON ORDERING THE WORK
Name:		ENT OR PERSON ORDERING THE WORK
	Kieth Parker	
Address:	14 Bracken Hill, Os	baldwick, York, YO10 3QE Email: N/A
B. REASO	N FOR PROD	JCING THIS REPORT
HMO licence		
		Date(s) inspection and testing carried out: 20/11/2023
C. DETAIL	S OF THE INS	TALLATION WHICH IS THE SUBJECT OF THIS REPORT
Occupier:	Kieth Parker	
Address:	14 Bracken Hill C	sbaldwick York YO10 3QE
Description o	of premises:	✓         Domestic         N/A         Commercial         N/A         Industrial         N/A         Other, please specify:         Student accommodation
Estimated ag	e of the wiring sy	vstem 12 <b>Years</b> Evidence of additions or alterations N/A Yes N/A No ✓ Not apparent
Installation re (Regulation 6	cords available? 321.1)	Yes No N/A Date of last inspection 2011 If yes, estimated age N/A years (as described in attached schedule if applicable) N/A
D. EXTENT	AND LIMITA	TIONS OF INSPECTION AND TESTING  The inspection and testing detailed in this report and accompanying schedules have been carried out in accordance with BS 7671 as amended
		ation covered by this report 25% of installation (3.82 of GN 3)
	oors, carpets, insula	he reasons, see Regulations 653.2
No inspection	of concealed cable o walls, ceilings, dec	S.
Limitations	agreed with	Land Lord Position (if applicable) Owner
Operational I including the		
including the	reasons ed that cables conce	aled within trunking and conduits, under floors, in roof spaces, and generally within the fabric of the building or underground, have not been inspected he client and inspector prior to the inspection. An inspection should be made within accessible roof space housing other electrical equipment.
It should be note unless specifica	e reasons ed that cables conce lly agreed between t	he client and inspector prior to the inspection. An inspection should be made within accessible roof space housing other electrical equipment.
It should be not unless specifica	ed that cables conce lly agreed between t	
It should be not unless specifica	ed that cables conce lly agreed between t	he client and inspector prior to the inspection. An inspection should be made within accessible roof space housing other electrical equipment.  CONDITION OF THE INSTALLATION
It should be not unless specifica	ed that cables conce lly agreed between t	he client and inspector prior to the inspection. An inspection should be made within accessible roof space housing other electrical equipment.  CONDITION OF THE INSTALLATION
It should be not unless specifica	ed that cables conce lly agreed between t	he client and inspector prior to the inspection. An inspection should be made within accessible roof space housing other electrical equipment.  CONDITION OF THE INSTALLATION

An unsatisfactory assessment indicates that dangerous (code C1) and/or potentially dangerous (code C2) conditions have been identified

## F. RECOMMENDATIONS

Where the overall assessment of the suitability of the installation for continued use on page 1 is stated as UNSATISFACTORY, I/we recommend that any observations classified as 'Danger present' (Code C1) or 'Potentially dangerous' (Code C2) are acted upon as a matter of urgency. Investigation without delay is recommended for observations identified as 'Further investigation required' (FI) Observations classified as 'improvement recommended' (Code C3) should be given due consideration.

Subject to the necessary remedial action being taken, I/we recommend that the installation is further inspected and tested by

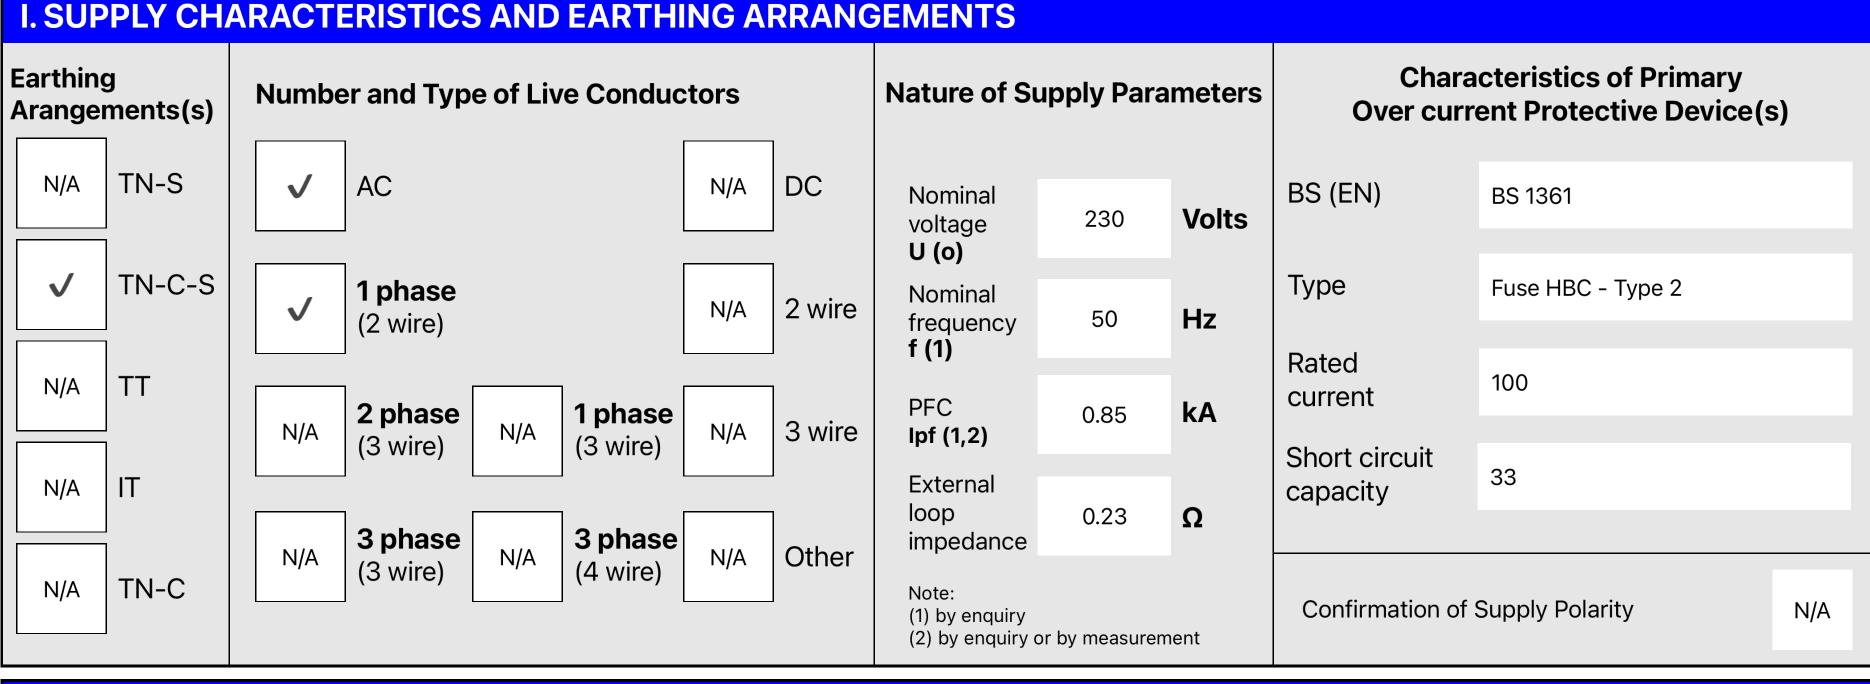

20/11/2028

## **G. DECLARATION**

I/We, being the person(s) responsible for the inspection and testing of the electrical installation (as indicated by my/our signature(s) below), particulars of which are described above, having exercised reasonable skill and care when carrying out the inspection and testing, hereby declare that the information in this report, including the observations and the attached schedules, provides an accurate assessment of the condition of the electrical installation taking into account the stated extent and limitations in section D of this report.

## CONDITION REPORT GUIDANCE FOR RECIPIENTS

This report is an important and valuable document which should be retained for future reference

- 1 The purpose of this Report is to confirm, so far as reasonably practicable, whether or not the electrical installation is in a satisfactory condition for continued service (see Section E). The Report should identify any damage, deterioration, defects and/or conditions which may give rise to danger (see Section K).
- 2 This Report is only valid if accompanied by the Inspection Schedule(s) and the Schedule(s) of Circuit Details and Test Results.
- 3 The person ordering the Report should have received the 'original' Report and the inspector should have retained a duplicate.
- 4 The 'original' Report should be retained in a safe place and be made available to any person inspecting or undertaking work on the electrical installation in the future. If the property is vacated, this Report will provide the new owner/occupier with details of the condition of the electrical installation at the time the Report was issued.
- 5 Section D (Extent and Limitations) should identify fully the extent of the installation covered by this Report and any limitations on the inspection and testing. The inspector should have agreed these aspects with the person ordering the Report and with other interested parties (licensing authority, insurance company, mortgage provider and the like) before the inspection was carried out.
- 6 Some operational limitations such as inability to gain access to parts of the installation or an item of equipment may have been encountered during the inspection. The inspector should have noted these in Section D.
- 7 For items classified in Section K as C1 ('Danger present'), the safety of those using the installation is at risk, and it is recommended that a skilled person or persons competent in electrical installation work undertakes the necessary remedial work immediately.
- 8 For items classified in Section K as C2 ('Potentially dangerous'), the safety of those using the installation may be at risk and it is recommended that a skilled person or persons competent in electrical installation work undertakes the necessary remedial work as a matter of urgency.
- 9 Where it has been stated in Section K that an observation requires further investigation (code FI) the inspection has revealed an apparent deficiency which may result in a code C1 or C2, and could not, due to the extent or limitations of the inspection, be fully identified. Such observations should be investigated without delay. A further examination of the installation will be necessary, to determine the nature and extent of the apparent deficiency (see Section F).
- 10 For safety reasons, the electrical installation should be re-inspected at appropriate intervals by a skilled person or persons, competent in such work. The recommended date by which the next inspection is due is stated in Section F of the Report under 'Recommendations'.
- 11 Where the installation includes a residual current device (RCD) it should be tested six-monthly by pressing the button marked 'T' or 'Test'. The device should switch off the supply and should then be switched on to restore the supply. If the device does not switch off the supply when the button is pressed, seek expert advice. For safety reasons it is important that this instruction is followed.
- 12 Where the installation includes an arc fault detection device (AFDD) having a manual test facility it should be tested six-monthly by pressing the test button. Where an AFDD has both a test button and automatic test function, manufacturer's instructions shall be followed with respect to test button operation.
- 13 Where the installation includes a surge protective device (SPD) the status indicator should be checked to confirm it is in operational condition in accordance with manufacturer's information. If the indication shows that the device is not operational, seek expert advice. For safety reasons it is important that this instruction is followed.
- 14 Where the installation includes alternative or additional sources of supply, warning notices should be found at the origin or meter position or, if remote from the origin, at the consumer unit or distribution board and at all points of isolation of all sources of supply.
