

# ELECTRICAL INSTALLATION CONDITION REPORT REPORT No: EICR-20211001081045

This report documents an accurate assessment of the condition of the electrical installation and whether it is fit for continued service in accordance with BS 7671:2018 - as amended

Basement Flat, 23 Park Street

York YO24 1BQ

The following work was carried out at the address above

100% of the fixed wire installation and 20% visual inspection of accessories.

And was deemed to be:

# SATISFACTORY

### SUMMARY OF THE CONDITION OF THE INSTALLATION

### General condition of the installation(in terms of electrical safety)

The existing electrical installation is wired to a previous version of BS7671 and upon inspection appears to be in a fair condition for age.

The accessories are in good condition for a rental property and overall are in a serviceable condition.

### General

-Various circuits have not been tested due to the clients working from home and socket circuits being unclearly labelled, therefore we could not turn off circuits maintaining confidence that the clients would retain power to computers/internet. This includes testing of RCD. -DB1 is made of combustable material.

There are no improvement/remedial works required to bring the installation up to a satisfactory standard.

We would recommend the rest of the installation is inspected when available.

Where the overall assessment of the suitability of the installation for continued use below is stated as **UNSATISFACTORY**, I/we recommend that any observations classified as 'Danger present' (Code C1) or Potentially dangerous' (code C2) are acted upon as a matter of urgency. Investigation without delay is recommended for observations identified as 'Further Investigation required' (Code FI). Observations classified as 'Improvement Recommended' (Code C3) should be given due consideration.

Overall assessment of its suitability for continued use

SATISFACTORY

1.6	Isolator (where present)	N/A							
2.0	PRESENCE OF ADEQUATE ARRANGEMENTS FOR OTHER SOURCES SUCH AS MICROGENERATORS (551.6; 551.7)								
2.1	Adequate arrangements where a generating set operates as a switched alternative to the public supply (551.6) (542.1.2.1; 542.1.2.2)	N/A							
2.2	Adequate arrangements where a generating set operates in parallel with the public supply (551.7)	N/A							
3.0	EARTHING / BONDING ARRANGEMENTS (411.3; Chap 54)								
3.1									
3.2	Presence and condition of earth electrode connection where applicable (542.1.2.3)	N/A							
3.3	Provision of earthing/bonding labels at all appropriate locations (514.13.1)								
3.4	Confirmation of earthing conductor size (542.3; 543.1.1)								
3.5	Accessibility and condition of earthing conductor at MET (543.3.2)								
3.6	Confirmation of main protective bonding conductor sizes (544.1)								
3.7	Condition and accessibility of main protective bonding conductor connections (543.3.2; 544.1.2)								
3.8	Accessibility and condition of other protective bonding connections (543.3.1; 543.3.2)								
4.0	CONSUMER UNIT(S) / DISTRIBUTION BOARD(S)								
4.1	Adequacy of working space/accessibility to consumer unit/distribution board (132.12; 513.1)								
4.2	Security of fixing (134.1.1)								
4.3	Condition of enclosure(s) in terms of IP rating etc (416.2)								
4.4	Condition of enclosure(s) in terms of fire rating etc (421.1.201; 526.5)								
4.5	Enclosure not damaged/deteriorated so as to impair safety (651.2)								
4.6	Presence of main linked switched (as required by 462.1.201)								
4.7	Operation of main switch (functional check) (643.10)								
4.8	Manual operation of circuit breakers and RCD's to prove disconnection (643.10)								
4.9	Correct identification of circuit details and protective devices (514.8.1; 514.9.1)								
4.10	Presence of RCD six-monthly test notice at or near consumer unit/distribution board (514.12.2)								
	Presence of non-standard (mixed) cable colour warning notice at or near consumer unit/distribution board (514.4)								
4.12	Presence of alternative supply warning notice at or near consumer unit/distribution board (514.15)								

ltem No	DESCRIPTION	OUTCOME See codes above
cont'o	CONSUMER UNIT(S) / DISTRIBUTION BOARD(S)	
4.13	Presence of other required labelling (please specify) (Section 514)	
4.14	Compatibility of protective devices, bases and other components, correct type and rating (No signs of unacceptable thermal damage, arcing or overheating) (411.3.2; 411.4; 411.5; 411.6; Sections 432, 433)	
4.15	Single-pole switching or protective devices in line conductor only (132.14.1; 530.3.3)	
4.16	Protection against mechanical damage where cables enter consumer unit/distribution board (132.14.1; 522.8.1; 522.8.5; 522.8.11)	
4.17	Protection against electromagnetic effects where cables enter consumer unit/distribution board/enclosures (521.5.1)	
4.18	RCD(s) provided for fault protection - includes RCBOs (411.4.204; 411.5.2; 531.2)	N/A
4.19	RCD(s) provided for additional protection / requirements - includes RCBOs (411.3.3; 415.1)	
4.20	Confirmation of indication that SPD is functional (651.4)	
4.21	Confirmation that ALL conductor connections, including connections to busbars, are correctly located in terminals and are tight and secure (526.1)	
4.22	Adequate arrangements where a generating set operates as a switched alternative to the public supply (551.6)	N/A
4.23	Adequate arrangements where a generating set operates in parallel with the public supply (551.7)	N/A
5.0	FINAL CIRCUITS	
5.1	Identification of conductors (514.3.1)	
5.2	Cables correctly supported throughout their run (521.10.202; 522.8.5)	
5.3	Condition of insulation of live parts (416.1)	
5.4	Non sheathed cables protected by enclosure in conduit, ducting or trunking (521.10.1) * To include the integrity of conduit and trunking systems (metallic and plastic)	
5.4.1	To include the integrity of conduit and trunking systems (metal and plastic) * To include the integrity of conduit and trunking systems (metallic and plastic)	
5.5	Adequacy of cables for current carrying capacity with regard for the type and nature of installation (Section 523)	
5.6	Coordination between conductors and overload protective devices (433.1; 533.2.1)	
5.7	Adequacy of protective devices: type and rated current for fault protection (411.3)	
5.8	Presence and adequacy of circuit protective conductors (411.3.1; Section 543)	
5.9	Wiring system(s) appropriate for the type and nature of the installation and external influences (Section 522)	
5.10	Concealed cables installed in prescribed zones (see Extent and limitations) (522.6.202)	
5.11	Cables concealed under floors, above ceilings or in walls/partitions, adequately protected against damage (see Extent and limitations) (522.6.204; )	
5.12	Provision of additional requirements for protection by RCD not exceeding 30 mA	
	* for all socket outlets of rating 32A or less, unless an exception is permitted (411.3.3)	
	* for supply to mobile equipment not exceeding 32A rating for use outdoors (411.3.3)	
	* for cables concealed in walls at a depth of less than 50mm (522.6.202; 522.6.203)	
	* for cables concealed in walls/partitions containing metal parts regardless of depth (522.6.203)	
	* for final circuits supplying luminaires within domestic (household) premises (411.3.4)	

ltem No	DESCRIPTION	OUTCOME See codes above							
5.13	Provision of fire barriers, sealing arrangements and protection against thermal effects (Section 527)								
5.14	Band II cables segregated/separated from Band I cables (528.1)								
5.15	Cables segregated/separated from communications cabling (528.2)								
5.16	Cables segregated/separated from non-electrical services (528.3)								
5.17	Termination of cables at enclosures - indicate extent of sampling in Extent of Limitations of the report (Section 526)								
	* Connections soundly made and under no undue strain (526.6)								
	* No basic insulation of a conductor visible outside enclosure (526.8)								
	* Connections of live conductors adequately enclosed (526.5)								
	* Adequately connected at point of entry to enclosure (glands, bushes etc.) (522.8.5)								
5.18	Condition of accessories including socket-outlets, switches and joint boxes (621.2 (v))								
5.19	Suitability of accessories for external influences (512.2)								
5.20	Adequacy of working space/accessibility to equipment (132.12; 513.1)								
5.21	Single-pole switching or protective devices in line conductors only (132.14.1; 530.3.3)								
6.0	LOCATION(S) CONTAINING A BATH OR SHOWER								
6.1	Additional protection for all low voltage (LV) circuits by RCD not exceeding 30mA (704.411.3.3)								
6.2	Where used as a protective measure, requirements for SELV or PELV met (701.414.4.5)								
6.3	Shaver sockets comply with BS EN 61558-2-5 formerly BS 3535 (701.512.3)	N/A							
6.4	Presence of supplementary bonding conductors, unless not required by BS 7671:2018 (701.415.2)								
6.5	Low voltage (e.g. 230 volt) socket-outlets sited at least 3m from zone (701.512.3)								
6.6	Suitability of equipment for external influences for installed location in terms of IP rating (701.512.2)								
6.7	Suitability of accessories and control-gear etc. for a particular zone (701.512.3)								
6.8	Suitability of current using equipment for particular position within the location (701.55)

# Multifunction Continuity Insulation resistance EFLI Tester RCD tester 101309512 -

Produced by electraform  $^{\ensuremath{\mathbb{R}}}$  2021 based on the MODEL FORM from BS7671:2018 (18th Edition)

### CONDITION REPORT GUIDANCE FOR RECIPIENTS

### This report is an important and valuable document which should be retained for future reference.

- 1. The purpose of this Report is to confirm, so far as reasonably practicable, whether or not the electrical installation is in a satisfactory condition for continued service (see SUMMARY OF THE CONDITION OF THE INSTALLATION). The report should identify any damage, deterioration, defects, and/or conditions which may give rise to danger (see OBSERVATIONS AND RECOMMENDATIONS).
- 2. The person ordering the Report should have received this Report without watermarks and the inspector/company should have retained a duplicate.
- 3. This Report should be retained in a safe place and be made available to any person inspecting or undertaking work on the electrical installation in the future. If the property is vacated, this Report will provide the new owner/occupier with details of the condition of the electrical installation at the time the Report was issued.
- 4. Where the installation incorporates a residual current device (RCD) there should be a notice at or near the device stating that it should be tested six-monthly. For safety reasons it is important that this instruction is followed.
- 5. The EXTENT AND LIMITATIONS section should identify fully the extent of the installation covered by this Report and any limitations on the inspection and testing. The inspector should have agreed these aspects with the person ordering the Report and with other interested parties (licensing authority, insurance company, mortgage provider and the like) before the inspection was carried out.
- 6. Some operational limitations such as inability to gain access to parts of the installation or an item of equipment may have been encountered during the inspection. The inspector should have noted these.
- For items classified in the OBSERVATIONS AND RECOMMENDATIONS section as C1 ("Danger present"), the safety of those using the installation is at risk, and it is recommended that a skilled person competent in electrical installation work undertakes the necessary remedial work immediately.
- For items classified in the OBSERVATIONS AND RECOMMENDATIONS section as C2 ("Potentially dangerous"), the safety of those using the installation may be at risk, and it is recommended that a skilled person competent in electrical installation work undertakes the necessary remedial work as a matter of urgency.
- 9. Where it has been stated in the *OBSERVATIONS AND RECOMMENDATIONS* section that an observation requires further investigation (Code FI) the inspection has revealed an apparent deficiency which may result in a C1 or C2, and could not, due to the extent or limitations of the inspection, be fully identified. Such observations should be investigated without delay. A further examination of the installation will be necessary, to determine the nature and extent of the apparent deficiency.
- 10. For safety reasons, the electrical installation should be re-inspected at appropriate intervals by a skilled person or persons, competent in such work. The recommended date by which the next inspection is due is stated in the *(see SUMMARY OF THE CONDITION OF THE INSTALLATION)* section of the Report and on a label at or near to the consumer unit/distribution board.

### CODES FOR TYPE OF WIRING

A	В	С	D	E	F	G	Н	O (Other)			
Thermoplastic insulated/sheathed cables		Thermoplastic cables in non- metallic conduit	Thermoplastic cables in metallic trunking	Thermoplastic cables in non- metallic trunking	Thermoplastic / SWA cables	Thermosetting / SWA cables	MICC cables	Other cable types not listed here			
FP	TR	HT	SY	ΥY	CY	VIR					
FP 200 - standard fire resistant cable	Tri-rated - BS 6231 high temperature - flame retardant cable	Hi Tuff - waterproof with a tough PVC sheathing for outdoor use	SY cable - flexible instrumentation cable with a galvanised steel wire braid	YY cable - flexible instrumentation cable with a galvanised steel wire braid	CY cable - flexible instrumentation cable with a galvanised steel wire braid and a PETP separator	VIR - Vulcanised Indian Rubber cable - no longer manufactured
