

# Energy performance certificate (EPC)

|   |                               |  |
|---|-------------------------------|--|
| 132 Temple Lane<br>Copmanthorpe<br>YORK<br>YO23 3TE | Energy rating<br><div>D</div> | Valid until: 25 October 2032<br>Certificate number: 9370-2715-8200-2522-5131 |
|---|-------------------------------|--|

**Property type**  
Semi-detached bungalow

**Total floor area**  
41 square metres

**Rules on letting this property**

Properties can be let if they have an energy rating from A to E.

You can read [guidance for landlords on the regulations and exemptions \(https://www.gov.uk/guidance/domestic-private-rented-property-minimum-energy-efficiency-standard-landlord-guidance\)](https://www.gov.uk/guidance/domestic-private-rented-property-minimum-energy-efficiency-standard-landlord-guidance).

**Energy efficiency rating for this property**

This property’s current energy rating is D. It has the potential to be B.

[See how to improve this property’s energy performance.](#)

The graph shows this property’s current and potential energy efficiency.

Properties are given a rating from A (most efficient) to G (least efficient).

Properties are also given a score. The higher the number the lower your fuel bills are likely to be.

For properties in England and Wales:

- the average energy rating is D
- the average energy score is 60

Breakdown of property’s energy performance

This section shows the energy performance for features of this property. The assessment does not consider the condition of a feature and how well it is working.

Each feature is assessed as one of the following:

- very good (most efficient)
- good
- average
- poor
- very poor (least efficient)

When the description says “assumed”, it means that the feature could not be inspected and an assumption has been made based on the property’s age and type.

| Feature | Description   | Rating  |
|---------|---|---------|
| Wall    | Solid brick, as built, partial insulation (assumed) | Average |
| Roof    | Pitched, limited insulation (assumed)               | Poor    |
| Window  | Fully double glazed                                 | Average |

| Feature              | Description                              | Rating    |
|----------------------|--|-----------|
| Main heating         | Boiler and radiators, mains gas          | Good      |
| Main heating control | Programmer, TRVs and bypass              | Average   |
| Hot water            | From main system                         | Good      |
| Lighting             | Low energy lighting in all fixed outlets | Very good |
| Floor                | Solid, no insulation (assumed)           | N/A       |
| Secondary heating    | None                                     | N/A       |

## Primary energy use

The primary energy use for this property per year is 341 kilowatt hours per square metre (kWh/m2).

► [What is primary energy use?](#)

### Environmental impact of this property

This property’s current environmental impact rating is D. It has the potential to be B.

Properties are rated in a scale from A to G based on how much carbon dioxide (CO2) they produce.

Properties with an A rating produce less CO2 than G rated properties.

### An average household produces

6 tonnes of CO2

### This property produces

2.5 tonnes of CO2

### This property’s potential production

0.7 tonnes of CO2

By making the [recommended changes](#), you could reduce this property’s CO2 emissions by 1.8 tonnes per year. This will help to protect the environment.

Environmental impact ratings are based on assumptions about average occupancy and energy use. They may not reflect how energy is consumed by the people living at the property.

## Improve this property's energy performance

By following our step by step recommendations you could reduce this property's energy use and potentially save money.

Carrying out these changes in order will improve the property's energy rating and score from D (63) to B (88).

► [Do I need to follow these steps in order?](#)

### Step 1: Internal or external wall insulation

Internal or external wall insulation

#### Typical installation cost

£4,000 - £14,000

#### Typical yearly saving

£60

#### Potential rating after completing step 1

67 | D

### Step 2: Floor insulation (solid floor)

Floor insulation (solid floor)

#### Typical installation cost

£4,000 - £6,000

#### Typical yearly saving

£50

#### Potential rating after completing steps 1 and 2

70 | C

### Step 3: Heating controls (room thermostat)

Heating controls (room thermostat)

#### Typical installation cost

£350 - £450

## Typical yearly saving

£19

## Potential rating after completing steps 1 to 3

71 | C

## Step 4: Solar water heating

Solar water heating

### Typical installation cost

£4,000 - £6,000

### Typical yearly saving

£20

## Potential rating after completing steps 1 to 4

73 | C

## Step 5: Solar photovoltaic panels, 2.5 kWp

Solar photovoltaic panels

### Typical installation cost

£3,500 - £5,500

### Typical yearly saving

£356

## Potential rating after completing steps 1 to 5

88 | B

## Paying for energy improvements

You might be able to get a grant from the [Boiler Upgrade Scheme \(https://www.gov.uk/guidance/check-if-you-may-be-eligible-for-the-boiler-upgrade-scheme-from-april-2022\)](https://www.gov.uk/guidance/check-if-you-may-be-eligible-for-the-boiler-upgrade-scheme-from-april-2022). This will help you buy a more efficient, low carbon heating system for this property.

[Find energy grants and ways to save energy in your home \(https://www.gov.uk/improve-energy-efficiency\)](https://www.gov.uk/improve-energy-efficiency).

### Estimated energy use and potential savings

## Estimated yearly energy cost for this property

£572

## Potential saving

£149

The estimated cost shows how much the average household would spend in this property for heating, lighting and hot water. It is not based on how energy is used by the people living at the property.

The potential saving shows how much money you could save if you [complete each recommended step in order](#).

For advice on how to reduce your energy bills visit [Simple Energy Advice \(https://www.gov.uk/improve-energy-efficiency\)](https://www.gov.uk/improve-energy-efficiency).

## Heating use in this property

Heating a property usually makes up the majority of energy costs.

### Estimated energy used to heat this property

| Type of heating | Estimated energy used |
|-----------------|-----------------------|
| Space heating   | 7400 kWh per year     |
| Water heating   | 1659 kWh per year     |

### Potential energy savings by installing insulation

| Type of insulation    | Amount of energy saved |
|-----------------------|------------------------|
| Loft insulation       | 955 kWh per year       |
| Solid wall insulation | 1404 kWh per year      |

### Contacting the assessor and accreditation scheme

This EPC was created by a qualified energy assessor.

If you are unhappy about your property's energy assessment or certificate, you can complain to the assessor directly.

If you are still unhappy after contacting the assessor, you should contact the assessor's accreditation scheme.

Accreditation schemes are appointed by the government to ensure that assessors are qualified to carry out EPC assessments.
